Arresting cells and atoms A digital camera captures a moving object (point A) to its right and another (point B) to its left. This image could be of a single moving object that passes by the stationary object (point C) or of two moving objects moving in opposite directions (point A and point B). You take two measurements at points A and C in order to predict the time it will take the objects to reach the point C. Show transcribed image dialog Title Font Size Default Import Photos Selenium Grid supports web automation for numerous browsers and platforms such as Internet Explorer, Firefox, Chrome, Safari, Opera. You can also check out the Selenium cloud platform which supports automation testing of a browser against a real website (not a sandbox version of a website, which the former is). To get started, you'll need to download and install the browser

Download
