set to Single-Family. Accept the defaults for the Layers. Leave the Parcel Area label style set to the parcel name, and then click OK.

Now you are prompted for a start point. Snap to a point nearest to this parcel line and sketch in a number of segments. Once you finish sketching those in, those two parcels are divided. Realize that you could have also done this by simply drawing an AutoCAD line, arc or polyline and then converting those AutoCAD objects into Civil 3D parcel segments.

There are also some other layout commands on the Parcel Layout Tools toolbar. There is a command to create Fixed Curves or Two point curves to the radius.

There is also a command to Draw Tangents with No Curves and a number of sizing commands, including Slide Line - Create, Swing Line - Create, and Free Form Create.
